## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09 June 2006 has been entered.

### ***Election/Restrictions***

2. Claims 104-109 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 05 December 2002.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 115 and 120-135 are rejected under 35 U.S.C. 103(a) as being unpatentable over 5,885,238 to Stevens et al. (hereinafter "Stevens") in view of U.S. Patent No. 5,407,434 to Gross.

Stevens teaches the treatment of aneurysms (col. 17, line 9) using two sheaths (broadly shown in Figure 6, the reference generally teaching that any of a number of instruments may be inserted through the sheaths; see col. 17, line 9). Stevens also teaches an inflatable cuff (Fig. 6) to hold a sheath in place, and a hemostasis valve (col. 42, line 39). Stevens also teaches the use of a guidewire (col. 7, line 11). Steven teaches the use of sheath device 422, a repair apparatus 322 and a numerous number of instruments that can be inserted into the repair apparatus 322 including an angioscope and penetration instruments.

Stevens, however, does not teach the use of 'gel-like' material. Gross teaches a similar device for sealing body-inserted instruments and uses a gel to seal around the instruments. The gel also seals the passage completely when the instruments are removed. It would have been obvious to one of ordinary skill in the art to modify the reference of Stevens by including the gel-like valve of Gross as a substantially equivalent alternative to the hemostatic valve.

Stevens and Gross, teach all the claimed subject matter except for repeating the insertion and removal of the aneurysm repair apparatus. However, it is commonly necessary for instruments to be inserted and removed from an introducer sheath(s) several times during the course of a surgical procedure. In fact, Stevens teaches in the abstract that the device may be used for aortic valve repair involving removal of the valve and replacement with a prosthetic valve. The removal, of course, would require removal of the tool, and the replacement would require reintroduction of tools. It would have been obvious to one of ordinary skill in the art to repeat the insertion and removal of the aneurysm repair tools, particularly if the repair was not successfully completed on the first attempt.

***Response to Arguments***

4. Applicant's arguments with respect to claims 115 and 120-135 have been considered but are moot in view of the new ground(s) of rejection.
